

PRESS RELEASE #2

Month 12 of U-Eco

JOB PROFILES' CATALOGUE

A circular economy entails a whole new system for how we create and consume. This then translates into a need for innovative professional figures who will be able to fill new job openings in a circular economy context. For this reason, a catalogue has been elaborated featuring 15 job profiles likely to be demanded in the next decade to meet new labour demand in the areas previously identified as having the highest growth potential. The catalogue is available [here](#).

TRAINING MODULES AND TESTING PHASE

12 training modules have been created with the purpose of improving participants' skills and competences to operate in a circular context, endowing entrepreneurs with a deep understanding of the difference between the linear and the circular economy, including the economic, social and environmental benefits associated with circular models and the risks for our society of the take-make disposal model. Furthermore, the training modules allow potential entrepreneurs to see the areas with the highest growth potential in a circular economy and the job profiles that will be increasingly in demand in the next decade. Finally, entrepreneurs were presented with the possible barriers they could face in the entrepreneurship process regarding rules and regulation. The training modules are currently being tested among end-users, with the purpose of improving their content.

LATEST EVENT

On the 17th of September all U-Eco project partners took part in an online meeting for mid-term project evaluation.

WHAT IS U-ECO?

U-Eco ("Upskilling for more creative circular ECOmomy") is a project that focuses on the process of transition towards a circular economy, addressing the need for specific circular economy training that is able to boost employability and self-employment while meeting new labor market demand.
